

AI white paper

From Rural Broadband Services 2023

What is this document for? Rural Broadband Services is looking for a person or person(s) capable of writing a business plan describing the use of an advanced processing system that will review, calculate, organize, date mine, create profile of personality types suited to work in task committees

What do Rural Broadband Services do? - Rural Broadband Services is a company with broadband experience with work history with USDA broadband loans/grants - local governments- private enterprise – investor groups.

What is the purpose of this project? - Explore the difficulty and accuracy of an AI intelligence-based service that profiles groups of stake holders assigned to work on specific projects such as Infrastructure building or rebuilding.

Why do this? There is a long history of failed projects throughout the USA in community-based groups trying to raise the interest of federal funding groups and or private investors.

How will this project get paid for? Depends on the length of time it takes to write a full concept paper – do a beta-test – length of time it takes to bring a presentable program to the open market.

What is my company being asked to do? - This is a business-to-business opportunity with expected responses to start in 3-4 quarter 2023 – capital raises 2024 – a developed business + software plans 2024.

Who would likely be profiled by an AI user- anticipated clients will be states government employees, school district representatives, county/city government employees and other ruling committees.

To whom do I send responses to this request?
